

EE313 (Modern Control Engineering)

The broad outline of the syllabus is as follows:

State space representation, state transformation (Similarity Transformation) and diagonalization, time response from state equations, stability (asymptotic, BIBO, internal), controllability, observability, state feedback and pole placement, tracking problems, observer design, reduced order observer design, linear quadratic regulator, linear quadratic gaussian

Reference Texts:

- a) Modern control engineering: Nagrath and Gopal
- b) Control Systems Engineering: Norman Nise
- c) Modern Control Engineering: Katsuhiko Ogata
